JORGE OTEIZA

JUNIOR FULL STACK DEVELOPER | React · TypeScript · Python · REST APIs

Valparaíso, Chile · +56 9 6494 4102 · oteiza.jor@gmail.com

Portfolio · GitHub · LinkedIn

PROFESSIONAL SUMMARY

Junior Full Stack Developer with hands-on experience building personal, independent and collaborative projects. I work with React, TypeScript, Python, Flask and relational databases, integrating interfaces, REST APIs, business logic and persistence. I have published and maintained web applications and built solutions for real operational needs. I use AI assistants to support development while staying involved in defining requirements, evaluating solutions, technical review and functional validation.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, React Router, Vite, HTML and CSS.

Backend & APIs: Python, Flask, FastAPI, REST APIs, SQLAlchemy and JWT.

Data & infrastructure: PostgreSQL, SQLite, Supabase, Redis, Docker, Neon and Render.

Quality & tools: pytest, unittest, Vitest, Playwright, Git, GitHub Actions, Postman, Figma and PyInstaller.

EXPERIENCE AND PROJECT DEVELOPMENT

Full Stack Web Development | Personal and independent projects

November 2024 – present · Valparaíso, Chile

• I design and evolve applications that connect interfaces, APIs, databases and business rules.
• I implement and validate features, integrations, authentication and persistence, using automated tests and functional reviews to catch issues.
• I maintain my own and collaborative projects, documenting decisions and verifying changes before integrating them.

FEATURED PROJECTS

Minimarket Manager | Independent project for a family-run minimarket

March 2026 – present · GitHub

Local point-of-sale and inventory management system built to support the day-to-day operation of a family business.

• Implemented sales with automatic stock deduction, product and inventory management, reports, restocking and backups, with local persistence in SQLite.
• Extended the system with sync whenever a connection is available, Supabase integration for authentication and storage, and a remote web admin deployed on Render.
• Adapted the admin interface to mobile and tablet and improved loading and sync states to make daily operation easier.

Technologies: React, TypeScript, Vite, Flask, SQLAlchemy, SQLite, Supabase, Render, PyInstaller and pytest.

Travel Calculator | Published personal full stack application

Web app · API · Private repository

Application that estimates the fuel consumption and cost of a route based on the vehicle's characteristics and the trip conditions.

• Built a modular, segment-based estimation engine that accounts for the vehicle, fuel efficiency, elevation, slopes, weather, road type, load and driving style.
• Implemented a Flask API with SQLAlchemy and PostgreSQL, supporting calculations for both guests and authenticated users; the latter can save and review their trip history.
• Added Google/JWT authentication, access control, request validation, rate limiting and session management.
• Ran automated tests and functional validations; resolved PostgreSQL connection issues by configuring `pool_pre_ping`.

Technologies: React, TypeScript, Vite, Python, Flask, SQLAlchemy, PostgreSQL, SQLite, JWT, MapLibre, LocationIQ, Open-Meteo, pytest, unittest and Playwright.

OTHER PROJECTS

AuthFlow | Personal authentication and session management project

• Implemented authentication with JWT in HttpOnly cookies, CSRF protection, session rotation and revocation, email verification and password recovery.
• Added Redis-backed rate limiting and tests with pytest, Vitest and Playwright.

Technologies: React, Flask, PostgreSQL, Redis, SQLAlchemy and Docker.

Short URL | Full stack application

• Built an application to shorten links, generate QR codes and track visits.
• Developed a FastAPI API with URL validation, redirects and PostgreSQL persistence.
• Automated testing and deployment with GitHub Actions, using Render and Neon.

Technologies: React, Vite, FastAPI, PostgreSQL, Neon, Render and GitHub Actions.

El Rincón del Vino | Collaborative project – 4Geeks Academy

Worked with a team of four developers to build a wine e-commerce site with a catalog, favorites, cart and JWT authentication. We used React, Flask and PostgreSQL, working with user stories, Kanban and interface design in Figma.

Technologies: React, JavaScript, Flask, PostgreSQL and SQLAlchemy.

EDUCATION AND CERTIFICATIONS

Full Stack Software Development · 4Geeks Academy

July – December 2023 · Frontend and backend training with a collaborative final project.

Basic Programming · Platzi

July 2022 – April 2023 · Programming and web development fundamentals.

Generative Artificial Intelligence · Udemy

In progress since June 2026 · LLMs, ChatGPT, coding assistants and prompt design.

ADDITIONAL INFORMATION

Languages: Spanish (native). English: self-assessed between A2 and intermediate, depending on the skill.

Previous career: Personal trainer, approximately from 2017 to 2023.

Previous education: Physical Trainer degree (Duoc UC) and Graduate Diploma in Exercise and Sports Sciences (PUCV).
